**Runway-Taxiway
 Retroreflective Markers
 FAA L-853**

Compliance

FAA AC: 150/5345-39C
 ETL Certified L-853
 ICAO Annex 14, Vol. 1

Retroreflective, reboundable airport markers are used to outline the edges of runways and taxiways. The L-853 is tested to the FAA standard and certified by ETL.

These airport markers utilize high-intensity retroreflective sheeting for increased visibility. The 2-1/4" posts are made of co-extruded polyethylene with U.V. inhibitors for superior corrosion resistance and durability. They can be installed on asphalt, concrete, fire hydrants or in soil. The runway-taxiway markers utilize only high strength plastic fasteners for long term performance. This, combined with the self restoring nature of the marker, helps keep life cycle costs among the lowest in the industry.

Features

- FAA Approved L-853, certified and tested by ETL.
- Minimal maintenance. Post rebounds to an upright position without human intervention.
- Easy to install using post-integrated locking pins, takes only minutes.
- Durable and corrosion resistant. No above-ground metal parts of any kind!
- Integrated locking tabs allow for quick post installation and replacement.
- Provides 360 degree visibility with high-intensity wraparound reflective sheeting.
- Surface mount, fire hydrant mount, and soil anchor versions available.
- 1-3/4" inner tube provides superior rebound capability.
- Posts are constructed of UV resistant durable linear low density, co-extruded polyethylene.

*L-853 Retroreflective Marker
 Part Number: 76-853-SMA18WB*
